

PVC Backed Coir Mat

Cleaning Guide

How to clean your PVC Backed Coir Mat

To clean your PVC Backed Coir Mat you should allow mud and wet dirt stains to dry entirely before removing with a stiff brush. Depending on the size of the mat we advise removing it from the mat well / recess occasionally to shake dirt free.

Chewing gum and other substances that stick the fibres together can be removed carefully with a freeze spray with minimal damage to the pile.

Things to avoid whilst cleaning:

- Do not vacuum, this can pull and unravel the coir fibres from the PVC backing leaving gaps within the coir. If you do need to vacuum the mat due to its size, use with a soft brush attachment only
- Coir matting is very absorbent. We do not advise saturating the mat when cleaning. Dry foam or cleaning powder should be used to remove any stubborn marks
- Do not use any solvents on the matting, this can cause both damage to the PVC Backing and the coir fibres resulting in pile loss

PVC Backed Coir Mat Cleaning

1. Allow any mud or wet dirt stains to completely dry
2. Then remove the marks with a stiff brush
3. Do not vacuum, this can pull and unravel your mat
4. Coir Mats are very absorbent do not saturate
